

## **New Deep Bay Improvement District Water Operator**

### Corewater Management Ltd. to assume water operator role with Deep Bay Improvement District as of November 16, 2024

The Deep Bay Improvement District would like to announce that Corewater Management Ltd. ("Corewater") will be taking over as the water operator for the Deep Bay Improvement District as of November 16, 2024.

The current water operator, Don Buchner, is looking to retire from his role, and the improvement district put out a public call for expressions of interest for water operator services earlier this year. The successful proponent was Corewater.

Corewater has been providing support to medium and smaller water suppliers for the past 23 years, and their staff include level II Water Treatment Plant Operators and a Level III Water Distribution Operator and Level I Water Distribution Operators, as well as a Water Quality Technologist.

Corewater will be working closely with the existing water operator over the coming weeks to get up-to-speed on the system. Any relevant public contact information for the new water operator (after hours, emergency contact) will be updated in advance of them taking over responsibility for the system.

The Board of Trustees would like to thank Don Buchner for his years of service and hard work.

Any questions related to this information can be directed to Sundance Topham, Administrator, Deep Bay Improvement District at 250-757-9312.

Sincerely,

Sundance Topham  
Administrator  
Deep Bay Improvement District
